

SAFELY STORED

C-TEC's XFP safeguards prestigious new store

C-TEC's XFP fire alarm panel has been installed at a prestigious new food store in Lytham, owned by leading regional retailer, Booths.

As Booths' newest and most impressive store yet, Lytham covers two floors and boasts an extensive range of quality food including a fabulous delicatessen and a tempting selection of wine. Connecting to a vast range of Apollo XP95 detection devices selected specifically for their flexibility and dependability aligned with C-TEC manufactured loop powered base sounders, the XFP ensures the safety of the public and protection of the buildings at the luxurious new shopping development.

Comments Nigel Thomas of Solid State, the company which installed the system: "We chose C-TEC's XFP due to the fact that it is very cost-effective yet incredibly powerful. The panel's flexibility was also key to specification as the open protocol nature of the system means that it can always be interfaced with other equipment such as additional security alarms, CCTV and disability aids at a later date if required".

Now third-party approved by the LPCB and meeting all relevant parts of the Construction Products Directive, C-TEC's entire range of XFP analogue addressable fire alarm panels are very cost-effective and have attained third-party LPCB approval demonstrating that all versions are fully

compliant with EN54 Parts 2 & 4, have been extensively tested by the Loss Prevention Certification Board and meet the relevant parts of the Construction Products Directive.

Established in 1847, Booths is an award winning independently and family owned food store chain with 26 stores throughout the north of England. It is currently celebrating after winning a top award at the International Wine Challenge Awards, the biggest annual event in the wine world.
